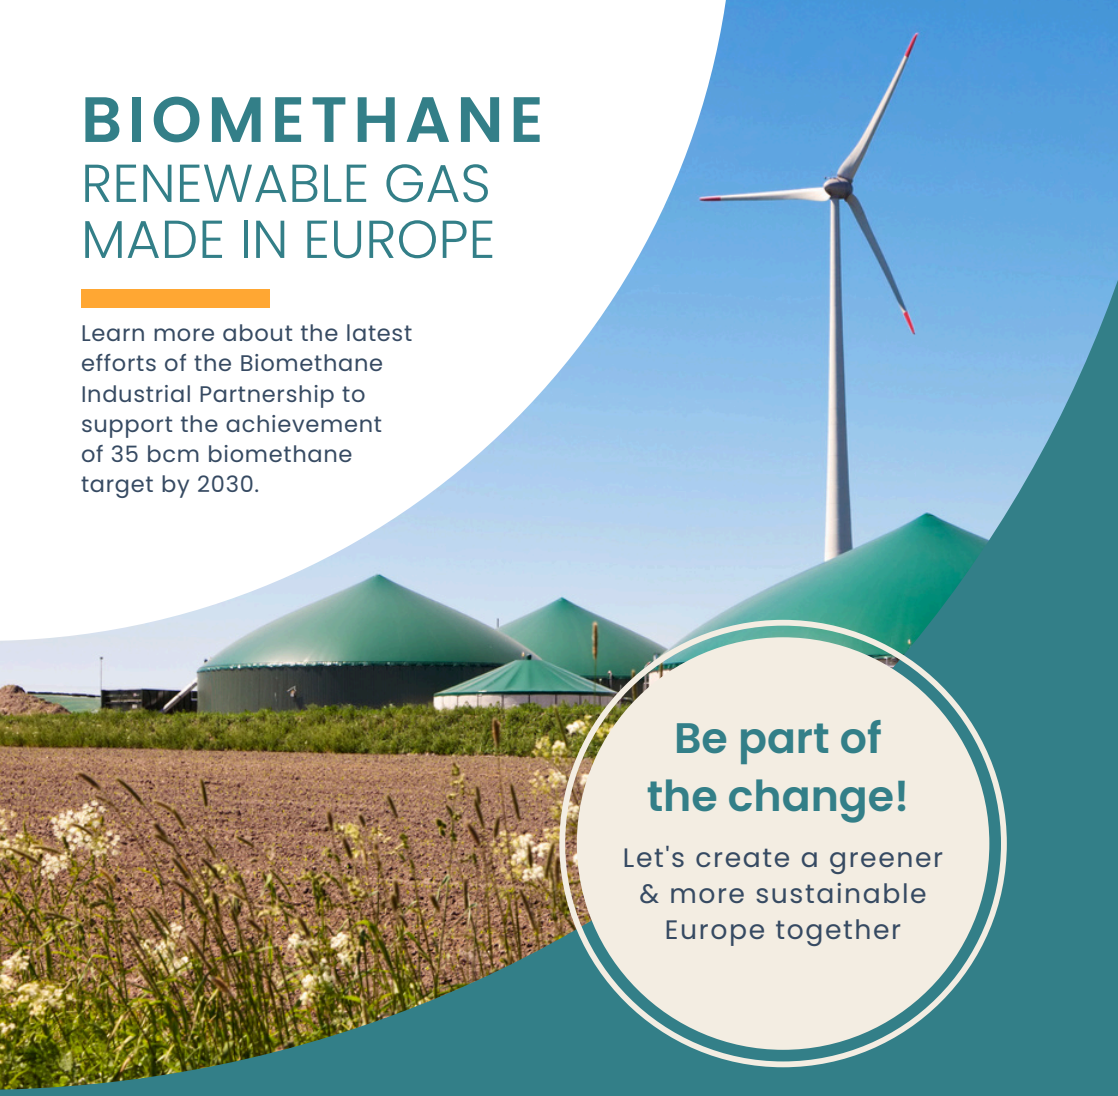
BIOMETHANE
RENEWABLE GAS MADE IN EUROPE

Learn more about the latest efforts of the Biomethane Industrial Partnership to support the achievement of 35 bcm biomethane target by 2030.



Be part of the change!

Let's create a greener & more sustainable Europe together

ENABLING
Climate neutrality

ACHIEVING
Europe's clean energy goals

ADVANCING
Europe's energy independence

ADOPTING
Sustainable agriculture practices

DISCOVER OUR LATEST WORK

How to reach the ambitious 35 bcm target by 2030? Discover the latest work of the Biomethane Industrial Partnership Task Forces and learn more about:

- The latest collaborative **efforts of the Member States** in developing biomethane
- The **2 newest BIP reports** on accelerating biomethane projects
- Explore the analysis on the **current biomethane costs** based on real industry data

Scan the QR code and download our latest studies, read more about ongoing research and stay up to date on future events.

Biomethane is replacing natural gas in various existing end uses:

Feeling frosty? Biomethane can be used for sustainable heat and electricity production

Biomethane is suitable as sustainable transport fuel

Biomethane is a means to enable climate neutral industries

BIP Europe
